

Environmental Protection Policy

Primax Electronics Co., Ltd. (hereinafter referred to as “the Company”) is committed to corporate sustainability. Maximizing environmental protection is one of the core objectives of the Company's sustainability strategy. We fulfill our compliance obligations in our manufacturing activities, product design and services; actively respond to international environmental initiatives; and lead our employees, suppliers and other key business partners in the value chain to put into practice our commitment to a sustainable environment.

Applicable objects and scope

- This policy applies to Primax, its subsidiaries in which it holds more than 50% of the shares, suppliers, service providers, contractors and other major business value chain partners. The applicable scope includes product research and development, procurement, production operations, distribution and transportation, and waste management. The Company follows this policy to fulfill its management responsibilities and promote environmental sustainability.

Environmental Protection Policy and Promotion Guidelines

- Fulfilling Compliance Obligations and Initiatives
 - The Company and its subsidiaries are committed to complying with or exceeding domestic and international environmental regulations and energy management-related standards, and to proactively responding to international environmental and climate-related initiatives and voluntary commitments.
- Committing to Climate Change Mitigation and Adaptation
 - The Company continues to identify climate risks and opportunities, commits to carbon neutrality as a milestone by 2040, strengthens carbon emissions management, strives to conserve energy use, continues to enhance the use of renewable energy, and continues to implement a net-zero pathway to achieve net-zero by 2050.
- Preventing Pollution and Preserving Ecology
 - The Company promotes chemical reduction management and waste reduction/recycling through product design and process design, and invests in pollution prevention (including wastewater and waste gas) to continually minimize the impact of its operations on the environment.
- Developing Green Products and Circular Economy
 - Our company adopts a life cycle approach to developing environmentally friendly products, controlling hazardous substances at the source and establishing a green design system to implement eco-design. We enhance internal R&D innovation through the principles of a circular economy to comply with regulations and customer requirements while fulfilling our responsibility as a global citizen.
- Promoting Value Chain Partnerships and Reducing Environmental Impact
 - The Company is committed to co-creating environmental solutions with value chain business partners and actively participating in environmental protection actions, from environmental system certification, carbon management capability building to climate governance, etc., to strengthen the sustainable operation of the supply chain and maximize the influence of Primax.
