

Water Resources Management Policy

Primax Electronics Co., Ltd. (hereinafter referred to as “the Company”) is committed to corporate sustainability. Maximizing environmental protection is one of the core objectives of the Company's sustainability strategy. We fulfill our compliance obligations in our manufacturing activities, product design and services; actively respond to international environmental initiatives; and lead our employees, suppliers and other key business partners in the value chain to put into practice our commitment to a sustainable environment.

Applicable objects and scope

This policy applies to Primax, its subsidiaries in which it holds more than 50% of the shares, suppliers, service providers, contractors and other major business value chain partners. The applicable scope includes product research and development, procurement, production operations, distribution and transportation, and waste management. The Company follows this policy to fulfill its management responsibilities and promote environmental sustainability.

To support the water resource related Initiative, we actively:

- Establish a water resource risk management mechanism, inspect and manage the water footprint of each production site, and disclose complete water resource information.
- Ensure the safety of the organization's personnel, enhance water conservation and recycling management, and improve the rationality and efficiency of water use.
- Control the efficiency of process water use through the operation of the environmental management system, and continuously monitor the quality of discharged water in accordance with regulations to avoid any impact on the environment.
- Incorporate physical risk assessment and dependency risk assessment of water resources in the supply chain into environmental risk management.
